Q1 2024 Performance Summary

Prepared for: Yıldız Lojistik ve Ticaret A.Ş. · Date: 19 April 2024

1. Overview

Northwind Analytics closed the first quarter of 2024 ahead of plan. Revenue grew across all three regions, driven by new logistics customers in Istanbul and Ankara and by higher utilisation of the route-optimisation platform. Operating costs stayed within budget despite the expansion of the support team, and customer churn fell to its lowest level since the service launched.

2. Key Metrics

Metric	Q4 2023	Q1 2024	Change
Revenue (EUR)	3.8M	4.35M	+14.5%
Active customers	212	247	+16.5%
Platform utilisation	71%	78%	+7 pts
Monthly churn	2.1%	1.4%	-0.7 pts

3. Outlook

For the second quarter we expect continued growth as two enterprise contracts move from pilot to production. Hiring will focus on data engineering, and the next platform release will add carbon reporting for every delivery route.

4. Risks

- Fuel price volatility may compress customer margins and delay renewals.
- Integration backlog with two ERP vendors could slow onboarding in Q2.
- Currency movements (EUR/TRY) affect reported revenue from Turkish customers.

5. Next Steps

The leadership team will review the hiring plan in May and present the carbon-reporting roadmap to key customers in June. A detailed budget update will follow with the half-year report.
